## **Vestibular Rehabilitation**

We have training to identify and treat issues associated with your vestibular system. Your complaints may be vertigo (spinning sensation), dizziness, or poor balance.

Vertigo can have various causes. Benign Paroxysmal Positional Vertigo (BPPV) is effectively treated by Canalyth Repositioning Techniques in the clinic. Ocular (eye), head movement, and balance treatment are all part of a comprehensive treatment program.

Vertigo is very debilitating... Physiotherapy can help!
